

## Customized Preventative Maintenance Programs To Meet Your Needs

F.M. Generator, Inc. provides top quality preventative maintenance programs to proactively help minimize generator and automatic transfer switch failures. We strive to ensure your system operates properly should a power failure occur. We offer customized maintenance programs to best manage your stand-by power requirements. We utilize technicians that are manufacturer certified and have extensive industry background. Each technician drives a fully stocked vehicle to make most repairs needed on the spot.

## We're On When The Power's Off

Below is a list of some of our preventative maintenance services which are customizable. These vary by the model and type of equipment including diesel, natural gas, and propane.

- Check entire unit for fuel, oil and water leakage
- Remove all carbon and dust deposits from generator
- Conduct safety shut-down check and run generator
- Replace all spark plugs annually
- Change engine oil, oil filter, and fuel filter annually
- Replace ignition points and condenser annually
- Replace distributor cap and rotor annually
- Check battery charging system and alternator
- Check engine radiator for leakage
- Check antifreeze
- Check all water hoses for proper pliability
- Adjust fan and governor belts
- And More!

**Fuel Deliveries - Load Bank Testing - Radiator Repairs
